New Twentieth Century Peaches

Bred and Tested in New Jersey

High Quality Nursery Trees

Propagated and Distributed by

THE NEW JERSEY PEACH COUNCIL, Inc.

NEW BRUNSWICK, NEW JERSEY

Fall, 1944

DESCRIPTION OF VARIETIES

A limited number of trees of the following varieties of peaches are offered by the New Jersey Peach Council to New Jersey growers.

N. J. 133

A medium large, oval, attractive yellow peach of exceptional edible quality for its season. More firm than most yellow peaches of its season. Almost free when ripe and hardier than Elberta. It ripens from 3 to 4 days before Red Bird and 2 to 3 weeks before Golden Jubilee.

N. J. 134

Much like N. J. 133 except somewhat larger and ripens a day or two later.

N. J. 137

An oval, yellow-fleshed peach of a markedly bright attractive red color. It usually ripens from 4 to 5 days later than N. J. 134. Almost free when ripe.

N. J. 135

A large, oval, firm, yellow freestone which ripens 5 to 7 days later than N. J. 137.

TRIOGEM (N. J. 70)

A firm, yellow-fleshed freestone of high quality ripening 2 to 3 days later than Golden Jubilee. Very attractive because of its high color and an excellent shipper. Requires good peach soil and good culture to insure the most desirable size. A better commercial variety than Golden Jubilee.

SUNHIGH (N. J. 82)

A large, firm, attractive, yellow-fleshed variety of good quality, ripening a few days earlier than Goldeneast. Generally it is a freestone, but sometimes the firm flesh adheres slightly to the pit when hard ripe. The fruit buds are somewhat hardier than Goldeneast and, therefore, it has been more productive

ORDER BLANK

Fall 1944

Date....., 194.....

To THE NEW JERSEY PEACH COUNCIL, INC.

Box 710, Princeton, New Jersey:

I would like to place an order for the following peach trees:

<i>Variety</i>	<i>No. Trees</i>	<i>Grade Preferred</i>
N. J. 133
N. J. 134
N. J. 137
N. J. 135
Triogem (N. J. 70)
Sunhigh (N. J. 82)
Goldeneast (N. J. 87)
Summercrest (N. J. 94)
White Hale (N. J. 63)
Afterglow (N. J. 84)
N. J. 109

LIABILITY AGREEMENT

Great care is used to avoid mistakes, but in case any trees prove to be untrue to the name under which they are sold, the original order will be replaced or the amount actually paid for such stock at the time of purchase will be refunded. The purchaser agrees to accept the trees on these terms.

in those areas in which low winter temperatures occur frequently. A very popular variety in New Jersey to precede Goldeneast. Has often topped the market.

GOLDENEAST (N. J. 87)

A very large, firm, highly colored, yellow-fleshed freestone of exceptional quality ripening about 2 weeks before Elberta, or at the same time as Hiley. This is an ideal peach for the commercial grower because of its firm flesh, large size, and attractive appearance. The dormant buds are medium in hardness and for that reason the trees are likely to be most productive in areas having winter temperatures no lower than generally occur in southern New Jersey.

SUMMERCREST (N. J. 94)

A large, oval, yellow freestone of high quality ripening just before Elberta. The fruit does not develop quite so much red color as Triagem, Sunhigh, or Goldeneast but is attractive unless the trees are too vegetative or it is picked when it is too green. It is most attractive when planted on one of the relatively light peach soils. Summercrest is an excellent variety to precede Elberta. It is in demand for home canning.

WHITE HALE (N. J. 63) (U. S. Plant Patent 31)

A large to very large, firm, white-fleshed freestone ripening with Elberta and J. H. Hale. The tree is more vigorous than J. H. Hale and the flowers are perfect. The quality of the fruit is good and it hangs to the tree exceptionally well. It is an excellent variety for growers who want large, firm, white-fleshed peaches during the Elberta season.

AFTERGLOW (N. J. 84)

A large, yellow-fleshed, dark red, freestone of good quality ripening immediately after Elberta. It has been hardier than Elberta in New Jersey. This is a good variety to prolong the Elberta season.

N. J. 109

A large, oval, firm, attractive, white-fleshed freestone of good quality, ripening immediately after Elberta or at the same time as Afterglow. This is an excellent white-fleshed peach to follow White Hale.

GRADES AND PRICES FOR ALL NAMED VARIETIES, FALL 1944

GRADE	<i>1 to 10 trees</i>	<i>10 to 25 trees</i>	<i>25 to 100 trees</i>	<i>100 to 250 trees</i>	<i>250 to 500 trees</i>	<i>Over 500 trees</i>
2 to 3 feet	—	—	\$.90	\$.75	\$.55	\$.45
3 to 4 feet	\$1.50	\$1.25	1.00	.90	.65	.55
4 to 5 feet	1.50	1.25	1.00	.90	.65	.55
5 to 6 feet	2.00	1.50	1.25	1.10	—	—

Prices for all numbered or unnamed varieties are 10 cents per tree higher for all grades.

These prices include truck delivery to some central point in New Jersey, such as Moorestown, Hammonton, or Glassboro, if the number of trees ordered makes such delivery practical. Trees may also be secured at the Princeton Nurseries, near Kingston, if the order has been accepted by the New Jersey Peach Council. Small shipments to distant points, including all orders for less than 25 trees, will be sent by express collect unless otherwise specified on the order blank.

PLACING ORDERS

All orders for trees should be sent to the New Jersey Peach Council, Inc., Box 710, Princeton, New Jersey. The Peach Council reserves the right to adjust the grade and number of trees ordered to the limited supply available. A deposit equal to 10 per cent of the total cost of the trees is required with each order and the balance before delivery. Orders for fall delivery will receive first consideration. Orders will not be accepted at this time for more than 400 trees of any one variety.
